## Summary

---

Full-stack developer building AI-powered products end-to-end — from LLM integration and REST APIs to payment systems and production deployment. Built a multi-tenant SaaS platform (FastAPI + React + Gemini API) with RBAC and Razorpay payments. Separately engineered a production churn prediction system with 88% recall, Redis caching, and PSI-based drift monitoring on 7,000+ telecom customers. Owning the full stack: backend logic, ML pipelines, frontend state, and containerised deployment.

## Skills

---

**Languages:** Python, SQL, JavaScript, TypeScript, HTML/CSS

**Libraries & Framework:** React, Flask, Scikit-learn, Streamlit

**Backend & APIs:** Fast API, REST APIs, JWT/RBAC, SQLAlchemy, Webhooks(HMAC)

**Database:** PostgreSQL, Redis, MySQL, MongoDB

**DevOps & Tools:** Docker, Git, AWS, Razorpay API, Power BI

## Projects

---

**AI Resume Screener (B2B2C SaaS Application)** | View Project [🔗](#) **April 2026 – Present**

*React, TypeScript, FastAPI, PostgreSQL, Docker, Gemini API*

- Built a **multi-tenant AI SaaS platform** automating resume screening - Gemini API + PDF parsing generates match scores, skill gaps, and structured candidate insights.
- Architected secure backend with **FastAPI, PostgreSQL, RBAC, and JWT auth**; integrated Razorpay payments with **HMAC webhook** verification and real-time frontend state sync.

**Customer Churn Prediction System** | View project [🔗](#) **Jan 2026 – April 2026**

*Python, FastAPI, Streamlit, XGBoost, Docker*

- Engineered end-to-end churn prediction system on 7,000+ telecom customers; achieved ROC-AUC 0.84 and 88% recall, identifying 9 in 10 at-risk customers before they churn.
- Reduced false negatives by 23% over baseline logistic regression by switching to threshold-optimized XGBoost (threshold=0.22 via cost matrix: FN=10×FP), directly minimizing missed-churn business cost.
- Deployed containerized REST API (FastAPI + Docker) serving real-time predictions with Redis caching, cutting redundant inference to zero for repeat queries.
- Built Streamlit analytics dashboard with SHAP waterfall explanations, enabling non-technical stakeholders to identify top churn drivers per customer without data team involvement.
- Implemented input validation, structured JSON logging, and PSI-based drift monitoring across 3 key features, reducing silent model degradation risk in production.

**Vendor Performance Analysis – Retail Inventory & Sales** | View Project [🔗](#) **Sep 2025 – Oct 2025**

*SQL, Python, Power BI*

- Uncovered \$2.71M in unsold inventory and 65.7% supplier concentration risk via SQL ETL pipeline (CTEs, multi-source joins) analysing vendor profitability, pricing, and turnover.
- Translated statistical vendor segmentation into a Power BI decision dashboard, enabling purchasing teams to reprioritise vendor contracts and flag slow-moving stock independently.

## Education

---

**B. Tech. in Computer Science and Engineering**

*Vellore Institute of Technology, Bhopal*

**Expected May 2026**

*CGPA: 7.76 / 10*

## Certifications & Training

---

- Oracle Cloud Infrastructure AI Foundation Associate Certificate.
- Complete Data Analytics Bootcamp – Udemy
- Deloitte Australia Data Analytics Job Simulation Certificate
- AWS Solution Architect Training – Ethnus
